(a) error vs. degree (n=4000)
RMSE of GATE estimate
mean degree
slope 1/2
(b) error vs. n (ER, d=16, Bernoulli)
number of units n
slope −1/2
regression (1, z, s)
Hájek (full exposure)
difference-in-means
(c) leverage predicts error
filled: Bernoulli
hollow: cluster
observed RMSE
predicted $\hat{\kappa}\sqrt{L/n}$
ER/Bernoulli
SBM/Bernoulli
SBM/cluster
WS/Bernoulli
WS/cluster
BA/Bernoulli
BA/cluster
