Connected graph
$6 \le n \le 30$
12 families
Five statistics
$\log n,\ \log m,\ \log \bar{d},$
$\log \Delta,\ \log \mathrm{diam}$
Ridge model
$\lambda = 1$
$\rightarrow$ predicted $\log C$
Controls (same scoring)
$2m(n-1)$ bound
constant predictor
shuffled-target ridge
Clipped log error
$\rightarrow$ family mean
$\rightarrow$ macro mean
(lower is better)
Monte Carlo
start-averaged
cover time
